> I have no feeling for this either - however, the markets must be huge and gets bigger by the day…..almost every device is connected somehow to the Internet….my scale at home, my camera, my photo camera, my TV, baby monitors, puls measurer, every phone, also land line, alarm system, house entertainment system, …..and much more coming, such as cars….the new Tesla car for example doesn't need a key or hard buttons….it's all done by iphone….I'm pretty sure the camera in my Samsung TV is much easier to hack than the camera on my Mac.
> This market will grow enormously I'm sure….and still, I think we should see this only as part of a comprehensive strategy that involves such tools as opposed to only focus on these tools. But I think it is a fact that such tools aren't protected at all today. The Tesla or the fridge or even a plane probably doesn't have the most advanced firewall. Camera's certainly don't.
